1. Introducing Acronis® Disk Director® 11

Acronis® Disk Director® 11 is a powerful and easy-to-use tool for managing disks and volumes. With a comprehensive set of operations, you can organize your hard disk and volume configuration for optimal performance, while keeping your data safe.

Key features

Acronis Disk Director offers many features including:

- **New! Create both basic and dynamic volumes**
The handy Create Volume wizard has been improved to support dynamic volumes creation. Now, in addition to basic volumes, you can easily create dynamic volumes in Acronis Disk Director to:
 - Increase the volume size beyond the capacity of a single disk, by using a spanned volume
 - Reduce access time to files, by using a striped volume
 - Achieve fault tolerance, by using a mirrored volume *
- **New! Add, remove, or break mirrored volumes ***
Make your basic or simple volume fault-tolerant in just one action by adding a mirror. If you need extra unallocated space on a disk containing one of the mirrors—remove a mirror. Break a mirrored volume to get two independent simple volumes with initially identical content.
- **New! Copy or move a volume of one type as a volume of another type**
Change the type of a volume when copying or moving it. For example, you can copy the contents of a mirrored volume to a spanned volume.
- **New! Convert primary volumes to logical and vice versa**
Convert a primary volume to logical to create a fifth volume on a disk that currently has four primary volumes.
- **New! Convert basic disks to dynamic and vice versa**
Convert the existing basic disks to dynamic to achieve additional disk reliability for data storage.
- **New! Convert GPT disks to MBR and vice versa**
Change the partitioning scheme of your disk the way you need it.
- **New! Import foreign disks**
Make dynamic disks added from another machine accessible for the system.
- **New! Changing a disk status: online to offline and vice versa ***
Change a disk status to offline in order to protect it from unintentional use.
- **New! Disk cloning**
The Disk Cloning wizard lets you replace the old basic MBR disk with a new one without reinstalling operating systems and applications. It transfers all the source disk data to a target disk. The source disk volumes can be cloned to the target disk "as is", or resized automatically with respect to the target disk size.
- **Disk and volume management operations**
Experience the vast array of disk and volume management operations:
 - Resize, move, copy, split and merge volumes without data loss or destruction
 - Format and label volumes, assign volume letters, and set volumes active
 - Delete volumes

- Initialize newly added hard disks
- Explore volume data, even on Linux volumes before performing operations
- Preview changes made in disk and volume layout before applying them
- Browse through the detailed information about all hard disks, volumes and file systems
- **Acronis Recovery Expert**
Helps you to recover accidentally lost or deleted volumes on basic MBR disks.
- **Acronis Bootable Media Builder**
Now, you can create bootable media based both on WinPE and Linux to use Acronis Disk Director on bare metal or outside of an operating system.
- **Acronis OS Selector**
Easy-to-use boot manager that allows several operating systems on a single machine and lets you create different configurations for any installed operating system, including Windows 7.
- **Log**
Examine information about disk and volume operations, including reasons for failure, if any.

* For the operating systems that support such functionality.

2. Installation and operation

2.1. Hardware requirements

The table below lists the minimum and recommended hardware requirements to install and run Acronis Disk Director.

Item	Minimum requirements	Recommended
Boot firmware	BIOS-based*	
Computer processor	Modern processor, 800 MHz or faster	1 GHz 32-bit (x86) or 64-bit (x64) processor
System memory	256 MB	512 MB or more
Screen resolution	800*600 pixels	1024*768 pixels or higher
Installation disk space	150 MB	
Other hardware	A mouse	A CD/DVD recording drive, or a flash drive for bootable media creation

* Machines that are based on Extensible Firmware Interface (EFI) are not supported.

2.2. Supported operating systems

The following operating systems are supported by Acronis Disk Director:

- Windows XP - all editions
- Windows Vista - all editions

- Windows 7 - all editions

2.3. Supported file systems

Acronis Disk Director supports the following file systems for performing operations:

- FAT16
- FAT32
- NTFS
- Ext2
- Ext3
- ReiserFS3
- Linux SWAP

The operations resulting in a change of volume size—that is: Create, Resize, Copy, Move, Merge, Split—are not available for the XFS, ReiserFS4, HPFS and JFS file systems.

2.4. Installing Acronis Disk Director

To install Acronis Disk Director 11

1. If you have the previous version of Acronis Disk Director, remove it before proceeding with the installation of Acronis Disk Director 11.
2. Run the setup file of Acronis Disk Director 11.
3. Click **Install Acronis Disk Director**.
4. Accept the terms of the license agreement.
5. Type in your license key. Skip this step if you want to evaluate the demo product version.
6. Select whether you want to install the program for all users on this machine, or for the current user only.
7. Proceed with installation.

2.5. Installing Acronis OS Selector

To install Acronis OS Selector, you need to first install Acronis Disk Director (p. 5). Then select **Start -> All Programs -> Acronis -> Disk Director -> Install Acronis OS Selector** and follow the setup program instructions. If you already have Acronis OS Selector installed on your computer, it will be updated by the new version.

During the installation of Acronis OS Selector, the hidden system folder BOOTWIZ will be created on your machine to keep the program loader. Acronis OS Selector will also copy operating system files found on your machine into this folder to avoid problems during the booting process and to simplify adding a new operating system in the future.

Acronis OS Selector can be installed in the **Typical** or **Custom** mode.

During **Typical** installation, the BOOTWIZ folder will be created in the system hard disk volume that contains the Windows files and folders.

Using the **Custom** installation option, you will be able to select the location of the BOOTWIZ folder. This might come in handy when a system volume is accidentally destroyed or damaged. In that case, you will be able to access the Acronis OS Selector boot menu even if the system volume is unavailable.

2.6. Precautions

To avoid any possible disk and volume structure damage or data loss, please take all necessary precautions and follow these simple rules:

1. Back up the disk whose volumes will be created or managed. Having your most important data backed up to another hard disk or CD will allow you to work on disk volumes being reassured that your data is safe.

Acronis is an extremely effective comprehensive data backup and recovery solution — Acronis True Image. It creates a data or disk backup copy stored in a compressed archive file that can be restored in case of an accident.

2. Check volumes to make sure they are fully functional and do not contain any bad sectors or file system errors.
3. Do not perform any disk/volume operations while running other software that has low-level disk access. Acronis Disk Director must obtain exclusive access to the target disk/volume. This means no other disk management utilities (such as the Windows Disk Management utility) can access it at that time. If you receive a message stating that the disk/volume cannot be blocked, close the disk management applications that use this disk/volume and start again. If you cannot determine which applications use the disk/volume, close them all.

With these simple precautions, you will protect yourself against accidental data loss.

2.7. User privileges

When managing disks and volumes on a machine running Windows, the scope of a user's management rights depends on the user's privileges on the machine.

In order to perform any operation using Acronis Disk Director, you must be logged on as a member of the **Administrators** group.

2.8. Running Acronis Disk Director

Running Acronis Disk Director in Windows

1. Select **Start -> All Programs -> Acronis -> Disk Director -> Acronis Disk Director**.
2. In the disk management area, examine the current layout of disks and volumes.
3. Add one or more management operations on disks and volumes to the queue of pending operations. These operations will take effect only after you commit them.
4. In the disk management area, examine how the layout of disks and volumes will look when the pending operations are completed.
5. Commit the pending operations.

Some operations, such as changing the size of a volume from which Windows starts, may require restarting the machine.

Running Acronis Disk Director from a bootable media

Acronis Disk Director has a bootable version that can be run on a bare metal system, or on a crashed machine that cannot boot normally, or even on a non-Windows system, like Linux. A bootable version of Acronis Disk Director is created with Acronis Bootable Media Builder.

To run Acronis Disk Director, boot the machine from a bootable media, and then select **Acronis Disk Director**.

While working under bootable media, Acronis Disk Director can perform almost all the operations on any disks and volumes that can be performed under Windows.

2.9. Upgrading Acronis Disk Director

Before proceeding with the upgrade, make sure that you have the license key for Acronis Disk Director.

Upgrading from Acronis Disk Director 10

If you already have Disk Director 10 installed and want to upgrade it to Acronis Disk Director 11:

1. Remove Acronis Disk Director 10 from your machine.
2. Follow the on-screen instructions as described in Installing Acronis Disk Director (p. 5).

Upgrading from the demo version of Acronis Disk Director 11

If you already have the demo version of Acronis Disk Director 11 installed and want to upgrade it to a full version:

1. Run Acronis Disk Director.
2. Select **Help > Enter license key** from the top menu, and then type in your license key for Acronis Disk Director.

3. Technical support

Users of legally purchased copies of Acronis Disk Director are entitled to free technical support from Acronis. If you experience problems installing or using Acronis products that you cannot solve yourself by using this guide, then please contact Acronis Technical Support.

More information about contacting Acronis Technical Support is available at the following link: <http://www.acronis.eu/homecomputing/support/>.

In order to open a support trouble ticket, please fill out the Web form on the Acronis site; support will only open a trouble ticket if it is initiated from this form.
