

Acronis® vmProtect™ 6

Simply the best backup for VMware®

Best Backup
for VMware®

You've started virtualising your servers and are planning next steps. Your critical data and applications that used to run on 5, maybe even 10 machines now run together on a single server host. What's your tolerance for downtime? A day? An hour? How about zero? You say you don't have time right now to address backup and recovery of those VMs? **Think again.**

Acronis® vmProtect™ 6 is the easiest to deploy, simplest to use, most efficient, secure, flexible, and scalable backup & recovery solution for VMware® you can buy.

User-Friendly Web interface.

It takes only about five minutes to install and begin using Acronis® vmProtect™ 6.

What makes Acronis vmProtect 6 better?

- **Installs in minutes** so you can quickly begin backing up your virtual machines. Deploy as a virtual appliance or install on any server or PC running Windows.
- **Extremely easy to use.** An intuitive web interface guides you through the backup process and makes recovery of whole systems or individual files as easy as clicking a mouse.
- **Agent-less backup** dramatically lowers ongoing administration costs.
- **Compression and built-in deduplication** removes unnecessary data and reduces the size of the backup.
- **Secure Backup and Data Verification.** Government-grade 256-bit data encryption ensures that only you can access your data, and verification confirms the integrity of the backup.
- **Instant Recovery of VM** by simply running its backup image – no need to run a full restore process.
- **Seamless integration with the cloud.** Optional vmProtect Online storage subscription available from Acronis can back up your data offsite for guaranteed access in case of a site-level disaster.
- **Unlimited migrations** of physical server to VMware VMs help accelerate your virtualisation initiatives.
- **One flat price per processor** (or per CPU) makes it really affordable to get started.
- **Certification by VMware** for ESX/vSphere™ is pending.

An integral part of the Acronis disaster recovery and data protection family.

When you buy Acronis, you buy award-winning image - based backup and disaster recovery solutions that feature patented disk imaging technology that excels across Physical, Virtual, and Cloud environments.

The Best Backup & Recovery Software for VMware VMs That Does It All

Improves TCO: Affordable, intuitive solution gets you started backing up your VMs quickly.

Shortens RTO: Instant recovery of VM by simply running backup image without full restore.

Key Features

Two Options for Easy Deployment

Choice of deploying as a Virtual Appliance or on any server or PC running Windows.

Intuitive Interface

Web-based interface remotely manages backup & recovery tasks for all VMs. Dashboard view, alerts, and email notifications keep you informed of the status.

Optimised for VMware

Leverages VMware vStorage API for Data Protection (VADP) to provide agent-less backup & recovery, change block tracking reduces traffic on LAN and load on ESX(i) hosts.

Efficient, Secure Backup

Options for excluding files from backup, built in deduplication, compression, and backup verification ensure optimal use of storage and memory resources and prevent unauthorised access.

Rapid Recovery of VMs

Instant recovery of VM by simply running VM backup - without having to perform full restore. Can restore full VM image or individual files and folders.

Accelerate P2V Virtualisation on VMware

Reliably convert an unlimited number of physical servers to VMware VMs to accelerate your virtualisation initiatives.

Cloud Storage Integration

Seamless integration with optional vmProtect Online cloud storage subscription enables you to backup offsite to a datacenter without having to purchase and manage server hardware yourself.

Supported Operating Systems

Agent-less backup & recovery for VMware VMs:

- vSphere™ 4.0 and 4.1
- vSphere™ 5.0
- Both ESX and ESXi hypervisors are fully supported except a free VMware vSphere Hypervisor (ESXi). For more information, visit www.acronis.com.

Note: Virtual machines can run any guest operating system supported by VMware.

Web Browsers - For remote configuration and management of backup & recovery tasks for multiple VMs running on one or more server hosts:

- Internet Explorer® 7 or later
- Mozilla Firefox 3.5 or later
- Safari® 5
- Google Chrome™ 10 or later
- Opera™ 10 or later

(Running on any operating system supported by the browser).

Windows® Machines - Only applicable if not installing as a Virtual Appliance directly on server hardware host – alternatively then can be installed onto x86 (32 bit) and x64 (64 bit) versions of:

- Microsoft® Windows Server® 2008/2008 R2
- Microsoft® Windows Server® 2003/2003 R2
- Microsoft® Windows® 7 Professional / Ultimate
- Microsoft® Windows Vista® Business / Ultimate
- Microsoft® Windows® XP Professional SP2+
