

# True Image™ 2013 by Acronis® Plus Pack

Add-on for True Image™ 2013 by Acronis® featuring enhanced backup and recovery capabilities

The True Image™ by Acronis® product family provides comprehensive and affordable system backup, recovery, and socially-oriented file synchronization for home user's PCs, and laptops. Based on award-winning backup and recovery technologies, the True Image by Acronis portfolio delivers full-featured, yet easy-to-use solutions meeting all home users' protection needs.

The True Image 2013 by Acronis Plus Pack add-on for True Image 2013 by Acronis features enhancements for advanced home users, including the flexibility to restore files, applications and an operating system to dissimilar hardware should they want to, or have to replace their existing PC or laptop. The solution also provides support for Dynamic Disks and Microsoft® Windows Preinstallation Environments (WinPE).

The optional True Image 2013 by Acronis Plus Pack integrates seamlessly within the True Image 2013 by Acronis and leverages its intuitive graphical interface.

## Acronis® Universal Restore™

In the event that users want to replace their machine, or if it has accidentally been destroyed or stolen, they should be confident that they can recover their backup image to a different computer. By using True Image 2013 by Acronis Plus Pack with True Image 2013 by Acronis, users can easily restore their backup onto a new machine, regardless of the make, model or installed components.

The Acronis Universal Restore feature allows users to recover an entire PC or laptop to dissimilar physical hardware or even to a virtual machine. It takes the last clean image from the original machine and imports the drivers associated with the new machine into the restore process. In addition, because the backup image is captured at the disk sector level, it already includes all the configurations, applications, and files, eliminating the tedious re-install process. Please note, the transfer of the Microsoft operating system onto a new machine has to comply with Microsoft's license regulations.

## Dynamic Disk Support

Dynamic Disks have many advantages, including multi-partition and fault tolerant volumes as well as easy partition size adjustment. With True Image 2013 by Acronis Plus Pack, backup and restore of dynamic volumes becomes easy, allowing users to take advantage of Windows Dynamic Disks.

Users can restore dynamic volumes onto bare-metal disks or to already created Dynamic Disks. The restore can take place within a running Windows operating system as well as from True Image 2013 by Acronis bootable media. In addition, Dynamic Disk operations will be available in recovery mode, so that users can lay out disks and partitions as they wish prior to the restoration of dynamic volumes.

## Features

- **Restore to Dissimilar Hardware**  
Restore a computer to dissimilar hardware regardless of make, model, or installed components, or to a virtual machine.
- **Dynamic Disk Support**  
Back up and restore dynamic volumes easily, taking advantage of Dynamic Disk capabilities including multi-partition and fault tolerant volumes as well as partition size adjustment.
- **Microsoft® Windows Preinstallation Environment (WinPE) Support**  
Speed up the recovery process with easy and quick integration of the latest Microsoft drivers, customized scripts, applications and plug-ins to the rescue or boot media.
- **Integrates seamlessly with True Image 2013 by Acronis**  
leveraging its graphical user interface.

## Support for Microsoft Windows Preinstallation Environment (WinPE)

Windows Preinstallation Environment (WinPE) is Microsoft's primary tool for booting computers without a functional operating system. It is a minimal Win32 operating system with limited services, used to prepare a computer for Windows installation, copying disk images from a network file server and initiating Windows Setup.

The support for WinPE allows users to install the latest Microsoft drivers, customized scripts, applications and plug-ins more easily and quickly. As a result, when users boot from their rescue media, they are able to use more hardware, and perform customized execution.

## Supported Systems\*

### Storage Media

- Hard disk drives
- Network Attached Storage (NAS)
- FTP Server
- CD-R/RW, DVD-R/RW, DVD+R /RW, BD-R
- PATA (IDE), SATA, SCSI, SAS, IEEE-1394 (FireWire), USB 1.1 / 2.0 / 3.0

### Supported Operating Systems

- Windows 8\* all Editions
- Windows 7 all Editions SP1
- Windows Vista all Editions SP2
- Windows XP Home Edition SP3
- Windows XP Professional (X32 SP3/ X64 Edition SP2)
- Windows Home Server 2011

### Supported File Systems

- FAT16/32, NTFS
- Raw Image Support
