Acronis® Internet Security Suite 2010

Protect up to three home PCs from external viruses, spam and other malware

Spyware, phishing attacks, spammers and up to 10,000 new viruses a week are serious threats to home PCs. Repel them all with Acronis® Internet Security Suite 2010, part of a family of Acronis products designed to protect PCs from external and internal threats. Acronis Internet Security Suite 2010 is a one-year subscription-based solution.

Protect your family and their computers

Block access to inappropriate websites and limit the timeframes during which children can access the Internet and games, all from a single PC. Depend on antispam software to stop unwanted e-mail from reaching your inbox. And, lock sensitive files and personal information away in your personal Acronis data vault.

Use the Web without being victimised

Connect securely to any network at home, at the office, or on the road, confident that Acronis' superior antivirus, anti-malware and threat detection technologies will protect you and your PC. High-speed, real-time Web page and e-mail scans keep you safe, while anti-spam protection turns away unwanted solicitations. Spyware programs that could track your activities are firmly blocked, while dangerous, hidden rootkit executables are exposed and eliminated. Web-monitoring secures your Internet connection while a two-way firewall limits access only to authorised users.

Guard against identity theft

Take care of online banking and Web browsing without worry. Acronis Internet Security Suite 2010 blocks malware from accessing personal information found in your e-mail. Moreover, it identifies and blocks Web pages that attempt to steal credit card data and other personal information while you're shopping on the Web. Keep conversations private on Yahoo!® and MSN Messenger® with advanced encryption.

Play games without interruption

If you are a gamer, you can set Acronis Internet Security Suite 2010 to automatically avoid making a request that could interrupt your game play and slow CPU performance.

Scans faster to lower system overhead

Acronis identifies known safe files that don't need to be scanned and moves on to those that do. This translates into faster scan speeds and reduced CPU processing requirements. For mobile computers, this also means more efficient battery use. Laptop users can prolong battery life further by taking advantage of an energy-saving Laptop Mode.

Features and Benefits

- Protect from external viruses, spam and other malware.

- Do your banking, shopping and Web surfing in private.

- Keep Yahoo!® and MSN® Instant Messenger conversations from prying eyes.

- Extra features for parents, gamers, networks.

- Block unauthorised access to your wireless network.

- Works with Acronis® True Image 2010, the award-winning way to back up and protect your Windows or Linux PC.
