Introduction

This document describes how to integrate Acronis Cyber Cloud with ConnectWise Manage.

The integration allows you to do the following:

• **Provisioning of the Acronis Cyber Cloud services to new and existing ConnectWise Manage customers by using the ConnectWise Manage console.**

• **Automatic billing of backup customers in the ConnectWise Manage console, based on their usage of Acronis Cyber Cloud.**

• **Automatic creation of tickets for backup, recovery, or quota-related issues in the ConnectWise Manage console.**
Prerequisites

You must have active accounts in Acronis Cyber Cloud and ConnectWise Manage.
Setting up integration

To set up integration between Acronis Cyber Cloud and ConnectWise Manage

1. Create a new API role
2. Create an API user and get API keys on the ConnectWise Manage site
3. Set up integration by specifying this data on the Acronis Cyber Cloud site

API role management

ConnectWise Manage uses a system of permissions and roles to control what API members can do.

For improved security, it is best to create a new role for the API member you will use in the Acronis integration:

1. Go to System > Security Roles and click on the + button.
2. The new role should have the following permissions granted:
   - Companies > Company Maintenance: Edit, Inquire - All
   - Companies > Contacts: Inquire - All
   - Service Desk > Service Tickets: Add, Edit, Delete, Inquire - All
   - Service Desk > Close Service Tickets: Edit, Inquire - All
   - Procurement > Product Catalog: Add, Inquire - All
   - Finance > Agreements: Add, Edit, Inquire - All
   - System > Table Setup: Add, Edit, Delete, Inquire - All
   - System > Table Setup > Customize button: Company / Company Status, Company / Company Type, General / Custom Fields, Service / Priority, Service / Service Board, Products / Category, Products / Subcategories, Product, Product Type, Product / UOM.
Creating an API member in ConnectWise Manage

To create an API member and get API keys

1. Log in to the ConnectWise Manage console.
2. Go to System > Members > API Members.

Note
This API member does not use a Manage User License.

3. Click the + icon to add a new API member.
4. Fill out the required information and set the **Role ID** to the new role you just created in “API role management” (p. 5). Alternatively, you could also use the **Admin** role.

5. Save the API member.
6. Switch to the **API Keys** tab.
7. Create a new API key and give it a name that will identify your integration.
8. Copy the public and private keys.

**Note**

The private key will no longer be available once you leave this screen.
Setting up integration with ConnectWise Manage

On this page, you can configure the integration between Acronis Cyber Cloud and ConnectWise Manage.

**Define the required login data**

1. Log in to the Acronis Management portal.
2. Go to Integrations > ConnectWise Manage.
3. On the Integration settings tab, specify your ConnectWise site, company name and API keys.
4. Click Log in.

As a result, you have configured the integration between Acronis Cyber Cloud and ConnectWise Manage.

Configuring mapping failure notifications

In the Mapping errors section of the Integration settings tab, set the following options:

1. Create tickets for mapping errors - use this check box to turn the feature on and off.
   - When enabled, the integration scans the mapping list for errors, then if such are found it verifies whether a ticket already exists. If not - it will create one; if yes - reopen.
   - When disabled, no mapping error tickets will be generated. However, references to existing tickets will be preserved and on next turn on, the already resolved tickets can be reopened, if necessary.
**Note**
Generated tickets contain the following information: date and time, CW Manage customer, Acronis customer tenants, error description and URL of partner integration page.

2. **How often tickets should be created/reopened** - select one of the available options from the drop-down list:
   - After each sync - after two-way quota sync, the integration will collect any errors and create/reopen tickets for them
   - Once per day - tickets will be created/reopened after usage sync

3. **Automatically resolve mapping error tickets** - when enabled, any open ticket in ConnectWise Manage, for which the original error is gone, will be resolved and the status set to the value configured in the corresponding settings.
Integration scenarios

Provisioning (automatic or manual)

**Automatic provisioning** means that when you create a customer in ConnectWise Manage, a corresponding tenant will be automatically created in Acronis Cyber Cloud and Acronis services will be provisioned for it.

**Manual provisioning** means that a corresponding tenant will not be automatically created in Acronis Cyber Cloud. You may need manual provisioning when you already have customer accounts in ConnectWise Manage and Acronis Cyber Cloud, and you want to map them manually. Another case is when you have a customer account in ConnectWise Manage and you want to create a corresponding tenant manually in Acronis Cyber Cloud.

**To set up provisioning**
1. Configure product mapping.
2. Create an agreement.
3. Depending on the type of provisioning:
   - **Automatic:** configure the provisioning settings.
   - **Manual:** configure the company mapping.

Billing (Pay-as-you-go or Prepaid)

**Pay-as-you-go (PAYG) billing** means charging a customer for the actual resource usage on a defined rate. If the PAYG billing is defined, resource usage is synchronized from Acronis Cyber Cloud to ConnectWise Manage with a 15 minutes interval.

**Prepaid billing** implies setting quotas to Acronis Cyber Cloud offering items based on the total quantity of additions defined in ConnectWise Manage.

**To set up billing**
1. Configure product mapping.
2. Create an agreement.
3. Configure the company mapping.

Ticket synchronization

**Ticket synchronization** translates Acronis Cyber Cloud alerts into ConnectWise Manage tickets. You can configure creating and auto-closing rules, as well as assign the priority, status, and other parameters of tickets.
To set up automatic ticket synchronization

1. Configure alert mapping.
2. Configure company mapping.
Configuring integration

Preparing additions for mapping

You can choose between two types of supported additions:

- Pay-as-you-go
- Prepaid

To set up Pay-as-you-go additions, fill in the following fields:

- **Product ID** - enter product unique identifier
- **Total Quantity** - specify total number of additions
- **Effective Date** - set this option to current month

![Diagram of Pay-as-you-go method](image)
To set up Prepaid additions, fill in the following fields:

- **Product ID** - provide unique identifier for this product
- **Total Quantity** - specify total number of additions
- **Effective Date** - set this option to prepaid month
- **Cancelled Date** - set to end of prepaid month or far into the future

![Product Mapping Image]

**Note**
Offering items are mapped to *Manage additions*, not to *Agreements*.

### Configuring the product mapping

To configure product mapping, open the **Product Mapping** tab. To start the automatic product mapping, click **Enable**. It makes the first configuration simple by providing auto mapping between ConnectWise Manage products and Acronis Cyber Cloud primary and secondary offering items.

Cyber Protect features are available as part of either Standard or Advanced Protection packs. Advanced Protection extends the Standard version with further protection capabilities that can be added only on top of it and are charged additionally. Advanced Protection can be assigned only to a workload that already has Standard Protection assigned.

The following primary offering items are currently available as workloads in the Standard Protection pack:

- Workstations
- Servers
- Virtual machines
- Web hosting servers

© Acronis International GmbH, 2003-2022
• Microsoft 365 seats
  ◦ Microsoft 365 Mailboxes
  ◦ Microsoft OneDrive
• Microsoft 365 seats (unlimited Acronis-hosted cloud storage included)
• Mailboxes
• OneDrive
• Microsoft Hosted Exchange
• Google Workspace seats
• Google Workspace seats (unlimited Acronis-hosted cloud storage included)
• G Suite seats
  ◦ Gmail (incl. Calendar, Contacts)
  ◦ Google Drive
• Google Workspace Team Drive
• Mobile devices
• Websites

Some secondary offering items are also supported:
• Workstations (included features)
• Web hosting servers (included features)
• Servers (included features)
• Virtual machines (included features)

Secondary offering items are free features, enabled only together with the primary ones, but whose usage is reported separately.

Advanced packs support multiple offering items.
You can edit the auto-mapped product names either by creating a new product name or selecting from the existing ones. When you define a new product name, it will be automatically created on the ConnectWise Manage site.

To set up product mapping

1. Select which services you are going to map with the ConnectWise Manage products. The following billing modes can be selected for the Cyber Protection service:
   - **Per Workload** - you will be charged for the total number of protected workloads with cloud storage charged separately.
   - **Per Gigabyte** - you will be charged for both local and cloud storage consumption.
   - **Legacy Editions**

   For more information about the Cyber Protect editions, refer to the Acronis Cyber Cloud Partner’s Guide.

2. Select the default backup storage. It will be enabled for all tenants that do not have the mapped backup storage if the Free option is selected in the Provisioning column.

3. Configure the product mapping. Select the corresponding ConnectWise Manage product for each of the offering items.
   - Edit the product name in ConnectWise if needed:
     - Specify a new product name by clicking the name in the ConnectWise product column. After completing all of the wizard steps, the new product will be created on the ConnectWise Manage site.
     - Select the product name from the list of existing ones. After completing all of the wizard steps, the offering items will be mapped with the existing ConnectWise Manage products.
   - Deselect the offering items that you do not want to provision.
   - Select Free if you want to provision the data source for all tenants, without mapping to the ConnectWise Manage products.

4. Configure the product settings for the new products to be created on the ConnectWise Manage site: category, subcategory, product type, product class, and unit of measure.

As a result, the initial configuration is done. You can make changes in the product mapping, if needed, on the Product Mapping tab.

Managing agreements in ConnectWise Manage

An agreement in ConnectWise Manage is a contract between you and your customer for providing services. An agreement for Acronis services must include products mapped to offering items in Acronis Cyber Cloud integration.

A mapped secondary offering item can be added to an agreement, only if the primary one is provisioned for this customer tenant. If an MSP provisions a primary offering item, the associated secondary ones will also be enabled for that customer. The addition will, however, only contain the usage of the primary offering item. Mapping the secondary offering item to a separate addition,
allows the MSP to add that usage to Agreements in order to give customers a fuller understanding of the delivered service.

Billing is supported for both Trial and Production customer accounts.

You can define how a customer will be billed by configuring the respective addition settings: on a pay-as-you-go or prepaid basis, or with overage as separate line item.

**To set up an agreement**

1. Log in to the ConnectWise Manage console.
2. Go to New > Agreement, create a new agreement or select an existing agreement, and add the products (additions) that you have selected for offering items in the "Initial configuration of the product mapping" section.

The following rules are used for an offering item quota setup and usage synchronization:

1. For all prepaid additions, offering item quotas will be set up based on the **Total Quantity** field. ConnectWise Manage does not sync the usage for offering item quotas that were created based on the prepaid additions.
2. For all pay-as-you-go additions, offering item quotas will be set to **Unlimited**. Usage for offering item quotas that were created based on pay-as-you-go additions is synced to the **Total Quantity** field of the corresponding additions.
3. If you want to see usage for prepaid additions, please combine prepaid additions and pay-as-you-go additions under the same product. In this case, the **Total Quantity** field for pay-as-you-go additions will show common usage.
4. Save the settings.
Overage as separate line item

This option is turned off by default and should be enabled from the following location:

1. Log in to the Acronis Management portal.
2. From the left-pane menu, go to Integrations.
3. On the Integration settings tab > Features section, toggle the Add overage as separate line item switch button.

On each agreement, for every offering item, where you would like to have overage reported as a separate line item, you will have to assign 2 additions. One of the additions should be set up as prepaid, the other - as pay-as-you-go.

Overage is calculated based on quota and usage.

Configuring the provisioning settings

To configure the provisioning settings

1. Go to the Provisioning tab.
2. To configure the customer provisioning and deprovisioning, edit the settings in the corresponding sections.
   - Create accounts based on - from the drop-down list, select either Company name or Company primary contact. For the first, you have to fill in Activation email as well.
• For automatic tenant creation, enable the **Automatically create customers** option. For manual tenant creation, disable it.
• To enable the two-factor authentication for all new customers, select the corresponding check box. When turned on, customers are provisioned with active two-factor authentication and all their users have it enabled as well.
• **Add overage as separate line item** - when enabled, any usage above the pre-paid amount, is charged on ‘pay-as-you-go’ principle, as a separate line item on the agreements.
• **Provision customer tenants as** - from the drop-down list, select either **Production** (default) or **Trial**. Customers are automatically switched to production mode after a full month trial.

**Note**
Customers in trial mode have full access to all integration functionalities, but only for a limited period of time (the duration of the trial).

You can provision your customer accounts in Acronis Cyber Cloud without product provisioning. Even if the **Product mapping** switch is disabled, the customer provisioning settings are still available for editing.

The synchronization between Acronis Cyber Cloud and ConnectWise Manage may take up to 15 minutes.

For more information, see also "Setting up two-factor authentication".

### Configuring the company mapping

**To map a customer in Acronis Cyber Cloud to a company in ConnectWise Manage, start provisioning, or remove mapping**

1. Switch to the **Company mapping** tab.
2. Select ConnectWise Manage companies.
Use the **Search** field and the **Filters** button to search for specific companies. Companies can be filtered by **Mapping**, **Type** and **Status**. **Type** and **Status** allow selecting multiple criteria. The options available under **Type** are loaded from the setup in your ConnectWise Manage account.

3. Select whether you want to create a new Acronis customer tenant or use an existing one. Manage customers are mapped to Acronis tenants in a one-on-one relationship. When mapping multiple tenants at once, you can only map to new tenants.

If you want to map to an existing tenant, a modal window will open, where you can select an Acronis customer tenant. Use the **Search** option to filter the list of already existing customers and easily navigate to the preferred one.

4. Click **Apply mapping**.
   The synchronization between the cloud platform and ConnectWise Manage may take up to 15 minutes.
Configuring two-way quota sync

Use the two-way sync feature to extend the quota synchronization process by enabling such interaction between Acronis and ConnectWise Manage.

The basic concept of this functionality is for you to first disable/enable/configure offering items for Acronis customer tenants in the Acronis Management portal, and then the two-way sync feature to ensure the propagation of these changes to ConnectWise Manage by updating the corresponding customer agreements.

To configure the two-way sync:

1. Go to Integration settings.
2. Locate the 2-way sync switch button and turn it on. This will enable the next section to configure default settings for new products, created during the sync process.
3. In the new section, provide the following properties that the two-way sync process will use to create new products in ConnectWise Manage: category, subcategory, product type, product class and unit of measure.
4. Click Save.

Enabling the two-way sync feature will add a new Agreement column to the Company mapping table on the Account mapping tab.

In addition, when a mapped customer is selected, a new Agreement button will appear in the toolbar.

Use this button to select a specific agreement that will be used by the two-way sync process to accumulate additions for offering items, enabled in the Acronis Management portal. The agreement selection is not necessary if the customer has a single active agreement in ConnectWise Manage only. However, if the agreements are more than one, you have to choose a particular agreement, otherwise the synchronization will throw an error.

Configuring the alert mapping

To configure the alert mapping

1. Go to the Ticket creation tab.
2. Select a service board and configure the mapping for each customer alert. You can map alerts to any combination of Type, Subtype and Item values available in your ConnectWise Manage setup.
   Items can provide further details to the main service types and subtypes. They can also be used to create ticket task lists for some of the most common services. You can create and associate ticket templates to your items that will pull in from a standard list of tasks you assign on template level.
3. [Optional] Click Settings and configure the following:
• If you want to create a new ticket for a mapped alert every time the initial ticket for this alert has been closed for a specific number of days, select the **New ticket creation** check box, and then specify the number of days. Otherwise, the initial ticket will be re-opened on every occurrence of the alert.

• If you want to automatically close tickets originated from alerts when issues that generated these alerts are resolved, select the **Tickets auto-closing** check box, and then select the status that will be assigned to a closed ticket in ConnectWise Manage.

4. Click **Apply**.

---

**Viewing tickets that originated from customer alerts**

*To view tickets that originated from customer alerts*

1. Open the ConnectWise Manage console.
2. Go to **ConnectWise Manage Console > Service Board**.
3. Select the service board used for the integration.
Troubleshooting mapping

Troubleshooting mapping errors

The mapping error is a common type of error when configuring the integration for ConnectWise Manage. It appears when there is a mismatch between the mapped products in the integration UI and Manage products that appear on additions.

When this happens, an error is shown on the Mapping page.

To see it, go to the Acronis Management portal > Integrations > ConnectWise Manage Integration Settings > Company Mapping.

In the Mapping column, you can observe the following message:

![Mapping failed]

When you hover over it, a longer explanation appears:

Create a valid Agreement or mapped Addition. Product Mapping can be disabled from the Integration settings tab.

Mapping failed

This gives a short description of how to resolve the problem.

Find below a list of the possible cases as well as the necessary steps to resolve each.

<table>
<thead>
<tr>
<th>MAPPING ERROR MESSAGE</th>
<th>EXPLANATION AND STEPS TO TAKE</th>
</tr>
</thead>
</table>
| Create a valid Agreement or mapped Addition. Product Mapping can be disabled from the Integration settings tab. | **Explanation**<br>The ConnectWise Manage Company, mapped to the customer tenant, doesn't have any mapped Additions in its Agreement.<br><br>**Steps to take**<br>If you are not using the integration to synchronize offering items usage, you may disable **Product mapping** in the Integration settings tab under **Features**. The error will then disappear.<br>  
If you are using offering items synchronization in the integration, make sure that the Agreement is effective (the start date is in the past and there is no end date or it is in the future) and not cancelled, and that it contains at least a single mapped Addition. This addition should be effective and not cancelled too. |
<table>
<thead>
<tr>
<th>MAPPING ERROR MESSAGE</th>
<th>EXPLANATION AND STEPS TO TAKE</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Background</strong> This error activates the deprovisioning functionality of the integration. Deprovisioning is configured on the <strong>Provisioning</strong> tab under <strong>Customer Deprovisioning</strong>.</td>
<td><strong>Note</strong> This option is enabled by default.</td>
</tr>
</tbody>
</table>
| • If the **Set offering item quotas to zero** option is enabled, all offering items quotas for this customer tenant will be zeroed after 4 hours activity of this error. | • If the **Disable the customer** option is enabled, the customer tenant will be **disabled** after this error has been active for the number of days specified in the option.  
• If the **Delete the customer** option is enabled, the customer tenant will be **deleted** after this error has been active for the number of days specified in the option. |
<p>| <strong>Explanation</strong> The Agreement has active Additions mapped to 2 different storages. A customer tenant in Acronis Cloud can have only a single backup storage enabled. The error description shows the names of storages that the integration is trying to enable. | <strong>Steps to take</strong> You should decide which storage the affected customer tenant should have (usually it is the currently enabled one). Then from Agreements remove or cancel any Additions mapped to other storages. |
| <strong>Steps to take</strong> You should decide which storage the affected customer tenant should have (usually it is the currently enabled one). Then from Agreements remove or cancel any Additions mapped to other storages. | <strong>Note</strong> This error might appear not just for backup storages, but for duplicate DR or Notary storages as well. |
| <strong>Explaination</strong> The Agreement has active Additions mapped to both backup and DR storages from different locations. A customer tenant in Acronis Cloud can have such storages only from the same location. | <strong>Steps to take</strong> To fix this error, partners decide which location the customer tenant should use (usually it is the current one). Then a review should be done of which Additions in the Agreement for the current customer are mapped to storages from different locations and replace these Additions with ones that are from the selected location. Replacement means |
| <strong>Backup and Disaster Recovery should use the same location. Update those settings in Additions and Agreements.</strong> | <strong>Explaination</strong> The Agreement has active Additions mapped to both backup and DR storages from different locations. A customer tenant in Acronis Cloud can have such storages only from the same location. |</p>
<table>
<thead>
<tr>
<th>MAPPING ERROR MESSAGE</th>
<th>EXPLANATION AND STEPS TO TAKE</th>
</tr>
</thead>
</table>
| Cannot disable a storage in use. To keep it, add this Addition to the Agreement. To disconnect it, manually remove the backups in the Cyber Protection Console. | Explanation: The customer tenant has a storage with usage and the integration tries to disable that storage. The integration will attempt to do that if the Agreement for the current customer doesn't have an Addition mapped to the storage or if the Agreement or Addition are not effective, were cancelled or have been removed.  
Steps to take:  
There're two ways to fix this error, depending on whether the storage has to be disabled for the customer or not.  
- If not, add an Addition, mapped to this storage, to the Agreement.  
- If storage needs to be disabled for the customer, then go to this customer's console and manually remove all backups. The usage will be set to zero and the integration can successfully disable the storage. |
| Tenant service cannot be enabled during offering item deletion. This problem will be automatically resolved when the wipe is over. | Explanation: An offering item cannot be enabled by the integration because of ongoing deprovisioning on the Acronis Platform side.  
Steps to take:  
This error will disappear as soon as deprovisioning is completed. |
| The Agreement can include only items from a single edition. Remove offering item mappings from other editions. | Explanation: The integration is trying to enable offering items from different editions for the same customer tenant. Each customer tenant can have offering items from a single edition only.  
Steps to take:  
To fix this error, you should decide which edition the customer tenant should use. Then from the Agreement, remove or cancel any Additions mapped to offering items from other editions. |
| No storage available for this edition or products are mapped to conflicting editions. Review and update mappings in the Agreement. | Explanation: The integration is trying to switch editions for a given customer, while at the same time also changing the related storage. Storage cannot be modified during edition switch.  
Steps to take:  
There are 2 ways to fix this error:  
- If you are trying to switch a customer's edition via the integration, then you should add the Addition, mapped to |

<td>--------------------------------</td>
</tr>
</tbody>
</table>
| If you don't want to enable the application for a customer, then the Addition mapped to the offering items from this application, should be cancelled or removed from the Agreement. | **Explanation**  
The Acronis API returns an error during offering items quota sync. This may happen if a combination of Product mapping and Additions results in a list of customer offering items not supported by the Acronis API. Usually detailed errors listed above are displayed. This error is only shown if the above errors do not cover the current case.  
**Steps to take**  
Verify that for this customer, correct offering items are mapped to Products, correct products are added to Additions and correct Additions - to Agreements. |
| Cannot modify some of the selected offering items. | **Explanation**  
The mapped customer tenant was disabled in Acronis Cloud. The tenant might be disabled during deprovisioning.  
**Steps to take**  
If the tenant was disabled manually, then it can be enabled from the Clients tab in the Acronis Management portal. |
| This tenant is currently disabled. You can enable it from the Clients tab. | **Explanation**  
The mapped customer tenant was deleted from the Acronis Cloud. The tenant might be deleted during deprovisioning.  
**Steps to take**  
Since deleting a tenant is irreversible, the only thing left to do is to map the account to a different customer tenant or remove the mapping. |
| No such tenant found. Map to another customer or remove mapping. | **Explanation**  
The mapped company was deleted.  
**Steps to take**  
Revert this action, if possible in the ConnectWise Manage interface. Otherwise, you will have to delete the mapping. |
| No such company found. You can delete the mapping. | **Explanation**  
This is a general case where the offering items sync or provisioning failed, but none of the other above-listed errors applies. Usually it is a temporary situation during offering items sync, for example a connectivity issue with the Acronis or ConnectWise API.  
**Steps to take**  
Wait 15 to 30 minutes for the next sync to happen, then the problem may disappear if the connectivity issue has been resolved. If this error appears after mapping an account to a
<table>
<thead>
<tr>
<th>MAPPING ERROR MESSAGE</th>
<th>EXPLANATION AND STEPS TO TAKE</th>
</tr>
</thead>
</table>
| **new customer tenant, the status of the created tenant may be invalid which could be fixed only manually.**  
For example:  
• Tenant wasn’t created, so this will be retried automatically.  
• Tenant pricing mode couldn’t be switched to production. This should be fixed manually.  
• Tenant admin wasn’t created or activated. This should be also fixed manually. | **Explanation**  
The two-way sync feature is enabled but the default settings for new products, created during this process, are not configured.  
**Steps to take**  
1. Go to Integration settings.  
2. Locate the new products section under the 2-way sync feature button.  
3. Provide a valid selection for Category, Subcategory, Product type, Product class and Unit of measure.  
4. Click Save. |
| **Product creation is not configured.** | **Explanation**  
The creation of one or more ConnectWise Manage products during two-way sync has failed. Most probable reason is that the name, generated for the ConnectWise Manage product, already exists.  
**Steps to take**  
This error will appear very rarely. However, if it does, follow the below steps:  
1. Go to the Product mapping tab.  
2. Make sure to map all offering items in active or potential use to ConnectWise Manage products.  
3. Wait for the next synchronization cycle and verify the error is gone. |
| **Agreement not selected.** | **Explanation**  
The customer has more than one active agreement in ConnectWise Manage but the two-way sync agreement is not selected for the mapped customer.  
**Steps to take**  
This error will appear very rarely. However, if it does, follow the below steps:  
1. Go to the Account mapping tab.  
2. Select the row where the mapping error appears. |
<table>
