

# Acronis Cyber Protect Cloud Integration with DirectAdmin

Complete Server Backup, Including Self-Service Recovery Capabilities for Clients

## WHAT'S THE IMPORTANCE?

With cyberattacks growing in sophistication, speed, and intensity, hosters and web professionals need to focus more on when an attack will compromise their websites, not if. Application weaknesses and software vulnerabilities continue to be the most common means by which cybercriminals carry out external attacks. With a website susceptible to malicious code injection and third-party vulnerabilities, the risk of data leakage or a full-scale data breach have never been greater, threatening the integrity of whole businesses and the privacy and security of their users. The only reliable method to ensure site availability and avoid permanent data loss is backup.

## ACRONIS BACKUP EXTENSION FOR DIRECTADMIN

This extension integrates DirectAdmin with the Acronis Cyber Protect Cloud solutions. The Acronis Backup extension for DirectAdmin offers hosters and web professionals reliable server and website protection, including a choice of local or Acronis Cloud backups – plus granular, self-service recovery capabilities for end clients.

The screenshot shows the DirectAdmin control panel with the Acronis Backup extension. The dashboard includes a search bar, a 'List Users' table, and several informational cards.

Username	Bandwidth / Disk Usage	Domains
sprokhorov	2.02 MB / 1000 MB 0 B / 100 MB	nextdomain.loc sprokhorov.loc
user1	6.7 MB / 1000 MB 10.6 MB / 100 MB	user1.com user1domain2.com
user2	304.03 KB / 1000 MB 10.6 MB / 100 MB	user2.com

# Acronis

## ABOUT ACRONIS CYBER PROTECT CLOUD

Acronis Cyber Protect Cloud is a platform that enables you to deliver cyber protection in an easy, efficient, and secure way. With one SaaS solution, you and your clients gain access to hybrid cloud backup, disaster recovery, AI-based ransomware protection, file sync and share, and blockchain-based file notarization and eSignature services, all managed from a single console.

- Differentiate your offering with next-gen cyber protection
- Deliver cutting-edge antimalware and antiransomware technologies at an affordable price
- Protect 34+ hosting platforms and workloads
- Reduce churn with easy upsell and cross-sell opportunities
- Shorten your proof of concept and deployment stages with a ready-to-use cloud solution
- White-label your services to increase brand value
- Leverage a RESTful API for additional integrations

## ACRONIS BACKUP EXTENSION FOR DIRECTADMIN INSIGHTS

With the Acronis Backup extension for DirectAdmin, hosters and web professionals can leverage key cyber protection features.

### Back up an entire DirectAdmin server locally, to a network folder, or to cloud storage.

The entire DirectAdmin server can be backed up on a predefined schedule to a destination of your choice. Backups can also be started on demand. The backup schedule can be configured in the backup console.

### Recover the entire server, including all websites.

You can easily revert the entire server and all the included websites to a pre-selected recovery point. You can track the progress of the operation in the backup console.

### Perform granular recovery of websites, individual files, mailboxes, or databases.

Recover websites, files, mailboxes, and databases in seconds from a single backup. Granular restore dramatically reduces recovery time.

### Enable encryption support.

It's possible to enable encryption for the backups during

the initial plugin configuration in the DirectAdmin user interface (UI), with unattended configuration script or by creating a new backup plan in the backup console.

### Enable self-service recovery for DirectAdmin clients.

Reduce support costs and increase flexibility by allowing your clients to restore a website, individual files, mailboxes, and databases on their own.

## OFFER CLOUD BACKUP TO END CLIENTS

- Create a premium service for all clients, or enable self-restore capabilities for those who opt-in for a premium subscription – the DirectAdmin extension makes it easy
- Protect your clients by performing backups on-demand, choose how often to back up, where to store backup data, and view recovery activity across all hosted clients
- Restore and export individual DirectAdmin end client accounts
- Enable or disable the self-service recovery feature in your clients' service plans or do so directly within the DirectAdmin UI for individual client subscriptions

The screenshot displays the DirectAdmin Control Panel interface. On the left is a navigation sidebar with a search bar and menu items like Account Manager, E-mail Manager, and Acronis Backup. The main dashboard area is titled 'Dashboard' and shows domain setup for 'new.com' with bandwidth and disk usage metrics. It also features activity cards for 'Active Since', 'Newest Message', 'IP of Domain', and 'Skin Options'. Below these are tables for 'Databases' (currently empty) and 'E-mail Accounts' (showing one account with 4 KB usage).
